

The **LabelMOUNTER Auto** is an automatic flexo plate mounting machine that can handle all formats up to 600mm wide.

The *LMA* provides complete control with precise registration, not just at the dots but all the way around the sleeve. The *LMA* is an individual technology platform for Flexo Print 4.0 and can work with most types of register marks, as well as Esko Smart Mark technology (RCC9 Register Marks powered by Lehner)

The *LMA* detects registration marks within a few seconds & automatically controls the position of each mounting position, virtually eliminating any press start-up waste caused by mis-registration or even upside down plates. This easy-to-use system controls the position of the registration all the way around the repeat length not just at the centre dots, ensuring the highest possible registration accuracy available in today's market place.
