Improve the quality assurance of your production by storing the current operating parameters and calling up this history later at any time.

Product features

Quality control
of the production process in real time.

Illustration
carefully arranged for a quick overview.

Data exportable
for storage on an external data drive.

Adhesion guaranteed!

SOFTAL
CORONA & PLASMA

Option LookBack

The function

The LookBack function as an option for all SOFTAL generators with TFT display saves a history of each of the current operating parameters, user actions and error messages of the generator in an internal memory. This data can be conveniently displayed and saved on a PC with the LookBack Viewer provided. The performance data can also be displayed on the generator display. The monthly view makes it possible to zoom into individual days or hour ranges in order to show the exact performance history.

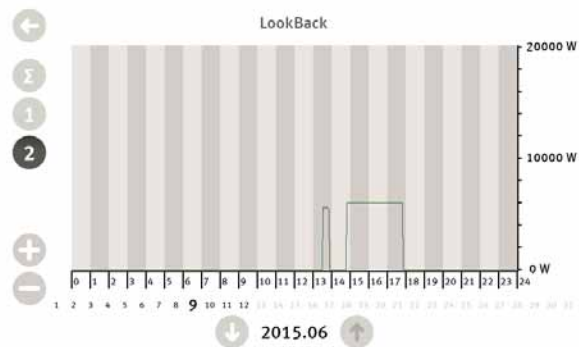

• Viewer: Display of time, performance, dosage and temperature.
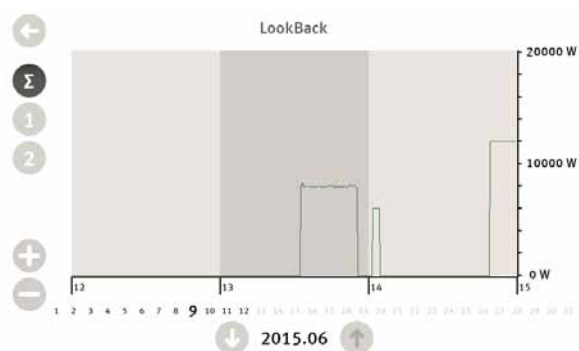

Your added value

Checking the quality of your production: Labels with the performance history can be created on our optional printer and can be applied directly onto the film roll produced. Alternatively, the recorded data can be read at any time, and then viewed and saved on the PC.

• Day view of the performance history on the generator display.

Accessories

Label printer: Print the performance history on labels and apply on the treated product.

• Day view (detail) on the generator display.

SOFTAL Quality   Custom-engineered   Uninterrupted operation
